HPC Documentation

Welcome to the overview page of the HPC cluster of the TU-Berlin!

Introduction

The cluster lives from participation, we will develop it further according to your questions and rely on you to make new entries, corrections and improvements. For example, on the page Wishes (protected area, login with TUB account) software wishes can be noted or in the HPC ISIS course you can get in touch with us and other users.

Who can use the cluster?

This cluster is a research cluster and can be used by TU Berlin staff for their research projects. Students are allowed to use the cluster if it is part of their thesis (Bachelor/Master) or if the work is used to improve the results of a research project of the TU Berlin.

In each of the above cases, access requires a TUB account, which is issued to all members of the university at the beginning of their employment via the provisioning procedure. If you already have a TUB account, further steps are necessary to register you for the use of the cluster. See also: Access information on this wiki.

Contents

We cover following contents on this documentation. We highly recommend the ISIS Course for more information.

- Hardware
- Software
- Scheduling
- Access
- Tutorials
- Cluster User Meeting

Support requests

Please submit support requests to our ticket system via support@hpc.tu-berlin.de.

A Discussion Forum for users of the HPC is located in the High Performance Cluster ISIS Course.

You can also ask for Introductory events for your subject area at our support address. We will be happy to come to you for a short presentation followed by a Q&A session (approx. 1h).
